BESKRIVNING

The universe has intrigued mankind throughout the ages, and in this book the author gives an account of inventions, discoveries, and more, which have contributed to our understanding of the universe. The history of humanity is just a small parenthesis in a universal perspective, but the historical milestones that have paved the way to what we now know is interesting reading, and the book offers a repetition of much of what we learned in school. But what will happen with the universe in the future. There is room for speculation, and the author contributes with interesting views. Dick de Joung, has an MS in Mechanical Engineering and has worked many years in Swedish industry, and 25 years as self-employed in the United States. He has published the books "Dear Grandkids, the Future is Yours", "Framtiden tillhör våra barn och barnbarn", and "Lite historia - från Big Bang till Higgs". This book is an expanded translation of the last one.

VAD SÄGER GOOGLE OM DEN HÄR BOKEN?

We finally know why The Big Bang Theory was cancelled and it's a bit sad.

What Triggered the Big Bang? It's Complicated ... and those high-energy gamma rays are now listless microwaves, ... we're a bit lost.
